## Education

|                                                                                         |                           |
|-----------------------------------------------------------------------------------------|---------------------------|
| <b>GSSS Institute of Engineering and Technology for Women, Mysuru</b>                   | 2022–2026                 |
| Bachelor of Engineering ( <b>Honours</b> ) in Electronics and Communication Engineering | CGPA: <b>8.63/10</b>      |
| <b>SVIC Jnanodaya PU College, Karnataka</b>                                             | 2022                      |
| Pre-University Course (PUC)                                                             | Percentage: <b>82.6%</b>  |
| <b>Marimallappa's High School, Karnataka</b>                                            | 2020                      |
| SSLC (10th Standard)                                                                    | Percentage: <b>85.76%</b> |

## Internship

|                                                                                                                                                                                                                                                                |                           |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------|
| <b>Full Stack Web Development Intern</b>                                                                                                                                                                                                                       | <b>Feb 2026–May 2026</b>  |
| PrishankSoft Pvt. Ltd.                                                                                                                                                                                                                                         | Project: WriteHub Website |
| <ul style="list-style-type: none"><li>Developed full-stack web features for the WriteHub platform.</li><li>Implemented and tested front-end and back-end modules.</li><li>Collaborated with developers to debug and improve application performance.</li></ul> |                           |

## Skills

**Programming Languages:** C, C++, Java, Python  
**Web Technologies:** HTML, CSS, JavaScript, Full Stack Web Development  
**Tools:** Vivado, Cadence Design Systems, Multisim, Microsoft Word, Excel, PowerPoint  
**Soft Skills:** Teamwork, Communication, Problem Solving, Time Management

## Projects

|                                                                                                                                                                                                                                                                                                  |           |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <b>Smart Energy Meter with Tamper Detection (Major Project)</b>                                                                                                                                                                                                                                  | 2025–2026 |
| <ul style="list-style-type: none"><li>Developed a smart energy meter for real-time voltage, current, and power monitoring.</li><li>Integrated Hall and Reed sensors for theft and tamper detection.</li><li>Implemented GSM-based alerts and LCD display for secure energy monitoring.</li></ul> |           |
| <b>WiFi Based Secure Wireless Communication Using RSA</b>                                                                                                                                                                                                                                        | 2024      |
| <ul style="list-style-type: none"><li>Built a secure WiFi communication system using RSA public-key cryptography.</li><li>Implemented encryption, authentication, and data integrity for wireless transmission.</li></ul>                                                                        |           |
| <b>Traffic Control System</b>                                                                                                                                                                                                                                                                    | 2023      |
| <ul style="list-style-type: none"><li>Simulated an 8052 microcontroller-based traffic light control system using Multisim.</li><li>Programmed assembly language logic to automate red, yellow, and green signals.</li></ul>                                                                      |           |

## Publication

**Intelligent Energy Meter System for Theft and Tamper Prevention,**  
EMIC 2026, Accepted for publication in IEEE Xplore.

## Certifications

- AWS Academy Cloud Foundations
- AWS Academy Machine Learning Foundations
- Cisco Python Essentials
- NPTEL – Programming in Java

## Achievements

- Recipient of the **Altium Global Scholarship** (2025).
- Recipient of the **Gita Chaitanya Merit Scholarship Award**.
- Presented a technical project at **WinTechCon 2025**.
